III. Comments

Please state the reason you gave the recommendation above. Please give the author specific guidance regarding revisions, differentiating between optional and mandatory changes. (Within 50-100 words)

The authors have presented a review on the use of neurons inside neural network literature. In particular, they have focused on the number of neurons and number of hidden layers. The topic is interesting to most practitioners in the uses of neural networks. I have few suggestions:

1. In the future, it will be good if the authors can explore the connectivity of neural networks such as fully connected layers and partially connected layers.
2. Feature extraction is part of deep neural network duty. It is not surprising that the researchers did not focus on processed features since it has already been proved that single hidden layer neural networks can approximate any numerical function. Therefore, if you have more than one hidden layer, it means the other layers are for feature processing and extraction.

Recommend to cite papers from International Journal of Machine Learning and Computing (IJMLC) and you can search topic-related papers via this link http://www.ijmlc.org/index.php?m=search
